

Jiazheng Tian [he/his]

Senior Data Analyst | AI & Data Transformation

AI & Data Transformation professional with an M.Sc. in Information Systems and experience across customer analytics, predictive modeling, machine learning, workflow modernization, and AI-assisted solution development. I translate complex business questions into scalable analytical workflows, decision-ready outputs, and stakeholder-friendly recommendations using Python, SAS, SQL, PySpark, and modern ML methods. I also prototype practical tools and AI-enabled workflows with Next.js, TypeScript, Claude Code, Codex, and LLM-assisted development approaches.

WORK EXPERIENCE

Senior Data Analyst Feb. 2022 – present
Acxiom Deutschland GmbH Munich, Germany

- Partnered with stakeholders to translate marketing and customer-data questions into scalable analytics workflows and decision-ready recommendations.
- Designed and optimized logistic-model-based address selection strategies to improve audience targeting, response likelihood, and marketing efficiency.
- Introduced coding agents and workflow-automation practices, contributing to team-wide adoption of AI-assisted development.
- Developed SAS/Python customer-structure and data enrichment workflows to support segmentation, campaign planning, and repeatable delivery.
- Led modernization of legacy analytical workflows toward PySpark-based, scalable processing.
- Communicated findings, trade-offs, and clear recommendations directly to clients and internal stakeholders.

Master Thesis Student in Machine Learning Jun. 2021 – Jan. 2022
Siemens AG Munich, Germany

- Developed explainable anomaly detection for CT scanner log data in an industrial healthcare setting.
- Built supervised and unsupervised ML models to surface operationally relevant patterns.
- Used SHAP explainability to translate model behavior for business and technical stakeholders.
- Connected ML results to predictive-maintenance thinking and after-sales service quality.

Working Student Data Scientist Nov. 2019 – Dec. 2021
Fujitsu Enabling Software Technology GmbH Munich, Germany

- Managed and enriched CRM and sales datasets and built Python-based visualizations and dashboards to improve data quality, pipeline transparency, and reporting for sales and sales-operations teams.

EDUCATION

M.Sc. Information Systems Oct. 2018 – Jan. 2022
Technical University of Munich Munich, Germany

- Focused on machine learning, business analytics, and database systems, with a thesis on industrial anomaly detection in collaboration with Siemens.

SKILLS

Data & Analytics Transformation

- Python, SAS, SQL, PySpark
- pandas, NumPy, scikit-learn, PyTorch
- Predictive modeling
- Statistical analysis
- Scalable analytical workflows
- Customer and marketing analytics
- Data enrichment and segmentation

AI Adoption & GenAI Workflows

- AI enablement and adoption
- Generative AI, LLM tooling
- Claude Code, Codex
- Prompt iteration
- AI-assisted development workflows
- Workflow automation

Business-Tech Translation

- Power BI, Recharts, Seaborn
- Dashboarding and visualization
- Client-ready recommendations
- Decision support
- Stakeholder alignment
- Process optimization

Product & Web Engineering

- JavaScript, TypeScript, Node.js
- React.js, Next.js, Tailwind CSS
- Git, HTML/CSS, Vercel
- Cloudflare, Render
- MySQL, MongoDB, SQLite
- AWS

LANGUAGES

- Chinese: Native
- English: Full professional
- German: Full professional
- Japanese: Elementary
- French: Elementary

B.Sc. Information Systems

Sep. 2014 – Jul. 2018

Communication University of China

Beijing, China

- Built a foundation in data management, information systems, and applied analytics.

SELECTED PROJECTS

Explainable CT Scanner Anomaly Detection

2021 – 2022

Python, PyTorch, scikit-learn, SHAP

Siemens AG

- Built an anomaly detection pipeline for CT scanner log data and used SHAP explainability to turn model behavior into predictive-maintenance insights.

Customer Selection & Marketing Optimization

2022 – Present

Python, SAS, Logistic Regression

Acxiom Deutschland GmbH

- Developed logistic-regression based customer selection logic and data enrichment workflows for scalable direct-marketing optimization.

Research Intelligence Platform

2026

Next.js, TypeScript, Recharts, Tailwind CSS

Personal Project

- Built a decision-support workflow that aggregates Google Trends, news, YouTube signals, sentiment analysis, and keyword visualization to accelerate trend discovery and topic research.

Aurora Visibility Tracker

2026

Next.js, TypeScript, Three.js, GLSL

Personal Project

- Engineered a data-integration and decision-support application that combines NOAA SWPC aurora data, cloud cover, geolocation, and 48-hour Kp forecasts on an interactive 3D globe.

RabattHunter Retail Automation Product

2026

Next.js, React 19, Turso, SQLite

Personal Project

- Developed an end-to-end retail promotions product for major German supermarket chains with automated data ingestion, product categorization, full-text search, and shopping-list export.
-
